

Aircraft External Noise Network, Phase II

General Project Information

FP5 Programme Acronym: GROWTH

Start Date: 2002-11-01

Duration: 36 months

Project Acronym: X²-NOISE

Project Description

X²-NOISE addresses the issue of aircraft noise, a major cause of concern around European airports, through complementary objectives in the strategic and dissemination domains:

- Formulation of key topics and efficient coordination of technology projects in complementarity with national activities, through development of common strategies, benchmarking, expertise mapping and promotion of novel ideas;
- Identification of necessary expertise and instruments to support / develop E policies in the area of airport noise management;
- Communication about noise reduction prospects and technological achievements towards General Public, Scientific Communities and Policy Making EU/Government Agencies and International Bodies.

Expected results are consistent with current EC work program goal of 10 dB reduction in the long term as well as newly formulated 2020 Vision. The total partnership involves over 25 organisations from 11 EU countries and 4 Accession States. The project associates a well balanced percentage of industry (including SME's) and academic expertise.
